TERMS OF SALE. Our regular terms are CASH WITH ORDER. Remittance by Bank Check, Post Office or Express Money Order is safest. Register letters containing money. Please do not ask for C.O.D. shipment unless you enclose 25% of the amount of the order.

In conformity with all responsible seedsmen, Comstock, Ferre & Co. give no warranty, express or implied, as to productiveness of any seeds or bulbs we sell and we will not be in any way responsible for the crop. Our liability in all instances is limited to the purchase price of the seed.

SPECIAL QUOTATIONS. Prices, particularly of Field Seeds, depend upon market conditions and are subject to change without notice. We will quote large quantities at prices as low as the highest quality of seed will permit. Let us quote you current prices on Grass and Field Seeds, Seed Potatoes and Onion Sets.

SEED TREATMENT. The treatment of seeds before planting is good insurance against loss and poor stands due to unfavorable weather and soil conditions. The so called failure of seeds to germinate is more often due to outside influences than any fault in the seeds themselves. The most effective materials we have found for seed treatment for good general use are Spergon and Phygion. These are particularly effective on Beans, Beet, Corn, Spinach and Squash and beneficial to a lesser degree on many other seeds. It is important that the right amount of the right material be used or germination may be retarded.

We recommend that our customers use these materials only with the most recent instructions of manufacturers and Experiment Station authorities. Upon request we can furnish seed on bulk orders treated as required at a slight advance in price, but we do not guarantee or hold ourselves responsible for results.

MAIL ORDERS. In the shipping season we endeavor to give prompt service on orders, and give special attention to seeds needed for immediate planting. During the rush season some delay is inevitable as we are called upon to supply an ever increasing number of orders in spite of being hampered by uncertain and slow delivery of our seed supplies. Early orders are advisable, particularly for seed to be sown in greenhouses and cold frames for growing early plants. Very early orders for general garden planting may have to be held for economical handling until crops of seed are received and packaged.

There are some varieties of seeds which have not produced normal crops this season. If our supplies are exhausted we will fill orders with a similar or equally useful variety unless we are requested to the contrary.

BEFORE MAILING YOUR ORDER Write your name, address and shipping point in full and plainly on the order sheet. Be sure to give nearest freight or express station if different from your post office address.

We will gladly send copies of this catalogue to any of your friends who may be interested.

SEED GROWERS AND DEALERS

FOR 127 YEARS — ESTABLISHED 1826

1947 — THE YEAR FOR BETTER GARDENS FOR PLEASURE — FOR PROFIT — FOR BETTER LIVING

The incentive for gardening in 1947 is no less than in the past years of war and necessity for individual production of food although the emphasis may now be placed upon the more pleasant features of gardening. Some gardeners who patriotically planted vegetables now are turning their attention to growing flowers and finer lawns. Others are interested in growing the choicer and more delicate vegetables not obtainable in the market. Still others are interested in combatting the increasing cost of living—there is a feeling of security with a good vegetable garden.

The most satisfying garden, whether it be vegetables or flowers, can only be grown by starting with the best of seeds. For many years we have been growing on our own farms, selecting and testing the best strains for our climate. Many of our seeds are supplied to the most critical market garden and estate trade. Let our experience guide you toward the finest possible garden.

There is much now to make gardening easier—tools and sprayers are available, new and powerful insecticides, such as the DDT preparations, and the new hormone weed killers that make lawn weeds disappear as if by magic without hurting the grass.

Among the finer strains of vegetables we call attention to the following:

BEANS, FORDHOOK BUSH LIMA 242 This is a new heavy yielding strain that bears a prolific crop even under adverse conditions. Pods are of good size and uniformly carry 3 to 4 thick beans of choice quality. Page 4.

BEANS, LONGREEN Considered the finest round podded sort. Developed from Tendergreen, it is an inch longer and has all the good qualities of its parent. Handsome in appearance and an abundant yielder. Page 5.

CELERY, SUMMER PASCAL Unexcelled as a mid-season green celery. The thick round stalks blanch easily to creamy white and are crisp and brittle, outstanding for quality and flavor. Page 11.

CORN, CARMELCROSS Large eared, medium early. The earliest top quality corn. Our improved strain is comparable to Golden Cross Bantam in size and quality and a week or more earlier. Page 12.

CORN, GOLDEN CROSS BANTAM Although one of the oldest hybrid corns, this is, in its improved form, still the leading main crop corn for all purposes. The ears are large with deep kernels which lead all other kinds in tenderness and flavor. The ears ripen uniformly within a few days, but retain their fine quality longer than most other kinds. Page 12.

ENDIVE, DEEP HEART FRINGED A superb salad vegetable, attractive in appearance and worthy of more general use. The plants develop deep hearts of broad fringed leaves of upright growth, blanching easily. Page 15.

LETTUCE, GREAT LAKES An "Iceberg" type with exceptional ability to head in hot weather. Vigorous plant with dark green leaves which fold closely to form large solid heads. Page 16.

MUSKMELON, SCHOON'S HARD SHELL This fine melon combines attractive appearance with superior quality. The flesh is fine textured, thick and remarkably sweet and tender, while the shell is firm and stands handling for market. Page 17.

RADISH, CAVALIER While this strain is described as a short-topped Scarlet Globe, the color is strikingly more bright and intense. The roots are perfect globe type and wonderfully uniform in size and maturity. When mature, remains several days before becoming pithy. Page 22.

SQUASH, BUTTERNUT Universally popular for its convenient size, dry sweet flesh and fine flavor. A heavy cropping squash that excels in quality and usefulness. Page 24.

FERTILIZER V H P F A new soluble complete fertilizer and plant stimulant. Its use when transplanting prevents wilting, causes rapid recovery and stimulates quick growth. As a fertilizer it supplies not only the major plant foods but all the rare minerals and hormones needed for plant growth, thus correcting soil deficiencies to a greater extent than other fertilizers. Page 45.

FUNGICIDE—SPERGON An outstanding and easily applied non-poisonous seed disinfectant. Beans and Peas and many other seeds dusted before planting show a marked increase in germination and healthier growth. Available in dry form for dusting and in a wettable type for soil disinfection and spraying. Page 46.

INSECTICIDE—SYNDEET 30 An improved insecticide containing 30% DDT. Controls aphids, mites and thrips, plus all insects controlled by DDT. Especially effective in killing and repelling Japanese Beetle. It does not stain foliage or flowers and is easy to apply, retaining its strength until washed off by rain. Page 46.

WETHERSFIELD GREEN

Planted with our mixtures 15 years ago it is still a vigorous clean lawn.

LAWN GRASS MIXTURES

Fine lawns can be grown only from clean, high germinating seed. Our mixtures are carefully planned for permanent velvety lawns with average soil and care. Each mixture is adapted to a particular type of use or soil condition, and composed of highly re-cleaned seed containing a negligible amount of weed seeds and waste. The number of seeds of the basic lawn grasses is so great that for each 400 sq. ft. only one pound of seed is needed. Even a less quantity of the higher priced mixtures will give excellent results if carefully sown and well fertilized.

SUPERFINE MIXTURE (Conn. Gold Seal)* Recommended for reseeding old turf and new seeding where careful preparation and extra care will be taken. Composed of the very highest quality Kentucky Blue Grass, Chewings Fescue, Astoria Bent and Red Top, without Clover, in proper proportion to make the finest velvety turf.

Lb. \$1.15; 2 lbs. \$2.25; 5 lbs. \$5.50;
15 lbs. \$16.05; 100 lbs. \$105.00

FINE LAWN MIXTURE (Conn. Blue Seal)* Our most popular high grade mixture, best for general use. Composed of the same grasses as our Superfine Mixture with the addition of White Dutch Clover and Domestic Rye Grass. Grows quickly and produces a really fine dark green permanent lawn. Lb. 95c; 2 lbs. \$1.85; 5 lbs. \$4.50; 15 lbs. \$13.05; 100 lbs. \$85.00

GREEN TURF MIXTURE (Conn. Red Seal)* A mixture of good quality at a moderate price. Contains all of the grasses in the higher priced mixtures, but in different proportion. May be planted with confidence that an excellent lawn will result.

Lb. 80c; 2 lbs. \$1.55; 5 lbs. \$3.25;
15 lbs. \$10.50; 100 lbs. \$70.00

WHITE DUTCH CLOVER (Creeping Variety) Valuable for lawns, especially on sunny banks and light poor soil. Helps combat crab grass. 1/4 lb. 40c; lb. \$1.35

SUPERFINE SHADY PLACE MIXTURE (Conn. Gold Seal)* Similar in quality to our Superfine Mixture. Adapted to ordinary shade and dry terraces where an exceptionally fine leaved turf is desired.

Lb. \$1.15; 2 lbs. \$2.25; 5 lbs. \$5.50;
15 lbs. \$16.05; 100 lbs. \$105.00

SHADY PLACE MIXTURE (Conn. Blue Seal)* An excellent mixture for shady places and dry sunny lawns. Grows rapidly and develops into a hardy long lived turf. Best for general use.

Lb. 95c; 2 lbs. \$1.85; 5 lbs. \$4.50;
15 lbs. \$15.05; 100 lbs. \$85.00

QUICK GREEN MIXTURE A clean and quick growing mixture containing a larger percentage of permanent grasses than is usually offered at so low a price. Recommended where a very quick growing green turf is required. Will make a fine leaved turf later.

Lb. 55c; 2 lbs. \$1.05; 5 lbs. \$2.50;
15 lbs. \$7.05; 100 lbs. \$45.00

WILD WHITE CLOVER Vigorous and hardy dwarf white clover, darker green and more permanent than the White Dutch. This strain makes it possible to maintain a beautiful dark green clover lawn without the usual patchy effect. Sow only 1 lb. to 5,000 sq. ft.

1/4 lb. 75c; lb. \$2.50

*Approved by the Connecticut State Department of Agriculture for varieties of grasses, purity and germination. Our mixtures exceed the standards by containing a larger percentage and greater variety of high priced fine-leaved grasses with less weeds and inert matter.

Grass varieties are listed on page 43. We will be glad to advise you as to special mixtures for unusual conditions. Lawn Grass Mixtures at 100 lb. price are not prepaid. 25 lbs. of any mixture at the 100 lb. rate.

SWEET CORN Standard Varieties

Sweet Corn is tender and will not stand frost nor will it germinate well in wet cold soils. It responds to good soil and clean, frequent cultivation. Plant in well-fertilized hills 3 feet apart each way, putting 5 or 6 kernels in each hill and covering to a depth of not more than 1½ inches. When 6 inches high remove all but three most vigorous stalks from each hill. For a succession throughout the season plant several varieties early in May, including first early to late. A good second early variety planted at intervals of two weeks until the middle of July will produce a continuous supply. Treatment with Semesan Jr. is very effective in insuring the germination of early planted corn and controlling seed borne disease. For prices see page 46.

1947 SEED SUPPLIES Good crops of seed this season have produced an ample supply of many varieties. Others have produced extremely small yields. Grass seeds, especially the kinds used for lawns, are sharply higher in price due to poor crops and higher cost of production. The cost of growing all kinds of seeds has increased, which together with increased cost of freight and handling would materially increase our prices if it were not for good crops. Regardless of cost we are maintaining our high quality and keeping prices at a reasonable level.

PEAS

Peas should be sown as early as possible in order to mature before the hot summer weather. To secure an extra **early crop** the smooth seeded varieties may be sown just as soon as the ground can be worked. The wrinkled varieties are not quite as hardy and should be planted a little later. Sow 2 or 3 inches deep in single or double rows 3 to 4 feet apart. The tall growing sorts require brush or other support. This is not so necessary for the dwarf varieties but they are greatly benefitted if kept off the ground. Inoculation of the seed before planting with Nodogen increases the crop and enriches the soil.

Treat Peas with SPERGON — it increases yield.

SPINACH

The most important greens crop. It is very hardy and will stand considerable freezing weather, but many varieties run to seed rapidly in hot weather. It is of easy culture and by successional sowing a supply may be secured throughout the season. For early spring use sow late in September and protect with hay or straw through the winter. May be sown in spring as early as the ground can be worked, either in rows or broadcast. Summer sowings should be on freshly plowed ground and the soil must be packed hard about the seed, as it will not germinate in dry soil.

Spinach seed treated with PHYGON germinates more evenly with a better stand.

SQUASH

Warm and highly manured soil is required for the most successful culture of Squash. The summer kinds, nearly all of which are bush growth, should be planted in hills 4 feet apart each way, while the winter and other running varieties require 8 to 10 feet. When thinning, leave only 3 or 4 plants to a hill. Dusting with Rotenone dust is effective to control the Striped Cucumber Beetle.

TOMATO

To furnish desirable early plants the seed should be sown in February or March in a hotbed or box kept in a warm place. When the plants are about 2 inches high they should be thinned or transplanted to ensure stocky plants. As soon as danger from frost is past transplant to the open ground, setting about 3 feet apart each way. They should be frequently cultivated and well-fertilized. The fruit will ripen earlier and be improved in quality if the vines are pruned to two stems and trained to stakes or trellises. Plants for late summer crop may be started from seed in May.

ANNUALS

Flowers That Bloom the First Year From Seed

The best of success with many annuals may be had by sowing them in beds where they are to flower. The hardier varieties such as Calendula, Larkspur, Centaurea and Poppy may be sown very early, while the more tender, as Balsam, Nasturtium, Marigold and Zinnia, are best planted later when the ground has become warm. Prepare the soil carefully, making it soft and fine, and sow the seed broadcast or in rows. When large enough, thin the seedlings so that they stand about half as far apart as their maximum height. If a hotbed or coldframe is available many kinds may be started earlier and transplanted, hastening the blooming period. Perennials listed on page 38.

BIENNIALS AND PERENNIALS

Biennials bloom at their best, for one season only, from seed sown the previous year.

Perennials bloom for several years, ordinarily attaining satisfactory flowering size the second year. Most perennials are best sown in June so that the seedlings will be ready for transplanting after the heat of the summer is over.

A bed or coldframe where some protection from the sun can be given is best. Some kinds flower the first season and will be found listed as annuals.

BONE MEAL An excellent fertilizer for general use. Used as a top-dressing for lawns, the feeding rootlets assimilate bone meal slowly as it disintegrates over a long period, keeping the lawn in good condition all through the season. Because of its long-lasting qualities, bone meal is very desirable for fertilizing all hard wooded plants, including roses, flowering shrubs, fruit bushes, and trees. A liberal application mixed into the soil when planting bulbs or perennial plants will result in remarkable size and brilliancy of flowers. Use 25 to 50 lbs. per 1000 sq. ft.
